Printware Introduces iJetColor Flow 2.0 for all iJetColor Inkjet Envelope Products.

ST. PAUL, MINNESOTA – July 15, 2025 – Printware has officially released **iJetColorFlow™ 2.0** on July 4th, Inkjet Freedom Day, for all its HP® inkjet products. This latest Digital Front End (DFE) sets a new industry standard for print quality, job management, and media handling—immediately benefiting our fast-growing base of over 1,000 inkjet customers. This new workflow will begin shipping August 1, 2025 and will be available for upgrade to all existing iJetColor1175 models.

iJetColorFlow 2.0 is powerful, proprietary software suite exclusive to Printware and built specifically for its implementation of HP's F1-1000 Thermal Inkjet Printhead technology. It is the only DFE featuring the **PQ Optimizer**, which enables the most advanced color fidelity available in the industry. Built on the proven Harlequin RIP from Xitron and Global Graphics, iJetColorFlow 2.0 includes an expanded set of inkjet-enabling tools:

Advanced Color Management Tools
- PMS Color Matching Software
- True CMYK Direct Print Option
- Enhanced Color Profiles for both commercial-grade stocks and inkjet-coated materials—ensuring brand color consistency across substrates

Advanced Inkjet Print Quality Tools
- **PQ Optimizer**^{sm} — a proprietary tool that manages inkjet print die output for quality, density, and accuracy, eliminating jet-outs across print jobs.
- Included FREE with all iJetColor 1175 systems covered under the **iJetAdvantage™** service plan

Advanced Job Management Tools
- New job control features: search, sort, print, pause & recover, scaling, and rotation
- Intuitive, stock-based presets for quick, foolproof job changeovers
- Built-in job cost calculator, system maintenance manager, and one-click access to **iJetColorWizard** AI-powered support

During a recent training session – **Justing Suedmeyer** of **Data Mail, Inc** reviewed the new workflow and noted that "it includes so many new features for making it even easier to use and the print quality improvements, especially printing pure CMYK ink colors, is game-changing!"

The new **iJetColorFlow 2.0 DFE** raises the bar for print quality, performance, and cost-efficiency. Final testing of the project was completed on July 4, 2025—part of Printware's celebration of:

- Customers' freedom to choose the best in inkjet technology
- The 249th anniversary of our country's independence
- Our 40th year of delivering high-performance printing solutions made in the USA
